## ABOUT ME

I am motivated to discover creative answers to the difficulties that people face, and I can confidently use HCD and Design Thinking approaches to complete these tasks. I use design exploration methodologies and quick iterative prototyping skills to explore and test new product experience concepts since I am at ease working on a variety of problem kinds and handling complexity and ambiguity. In order to measure success, I also make use of user data and lean validation frameworks. I work to make ethical and practical experiences through design that enhance people's lives and interactions with the outside world.

## PROFICIENCY & SKILLS

- Agile Software Development
- Fidelity Design & Wireframe
- Problem Solving
- Critical Thinking
- User Story Telling
- Project Management
